1. Summary

ZLAN5102-3 is a high performance serial server device. It converts RS232/485/422 protocol to TCP/IP protocol. It can conveniently let your legend serial device connect to Ethernet and Internet, and upgrade the serial device with networking.

The RS232/RS485/RS422 port of ZLAN5102-3 supports Full-duplex/Half-duplex, uninterrupted communication. It embedded with lightning protection circuits. It supports DHCP, DNS. It supports virtual serial driver, and user's previous PC software using serial communication need not change.

Figure 1 ZLAN5102-3 converter

It can be applied to:

- building/e-guard system/security system;
- bank/medical automation system;
- dealing in securities system;

- industry automation system;
- Point of Sells (POS) system;
- Information Appliance.

The typical application is showed in Figure 2. The serial device is connected to ZLAN5102-3 serial port, and then connects ZLAN5102-3 to Ethernet.

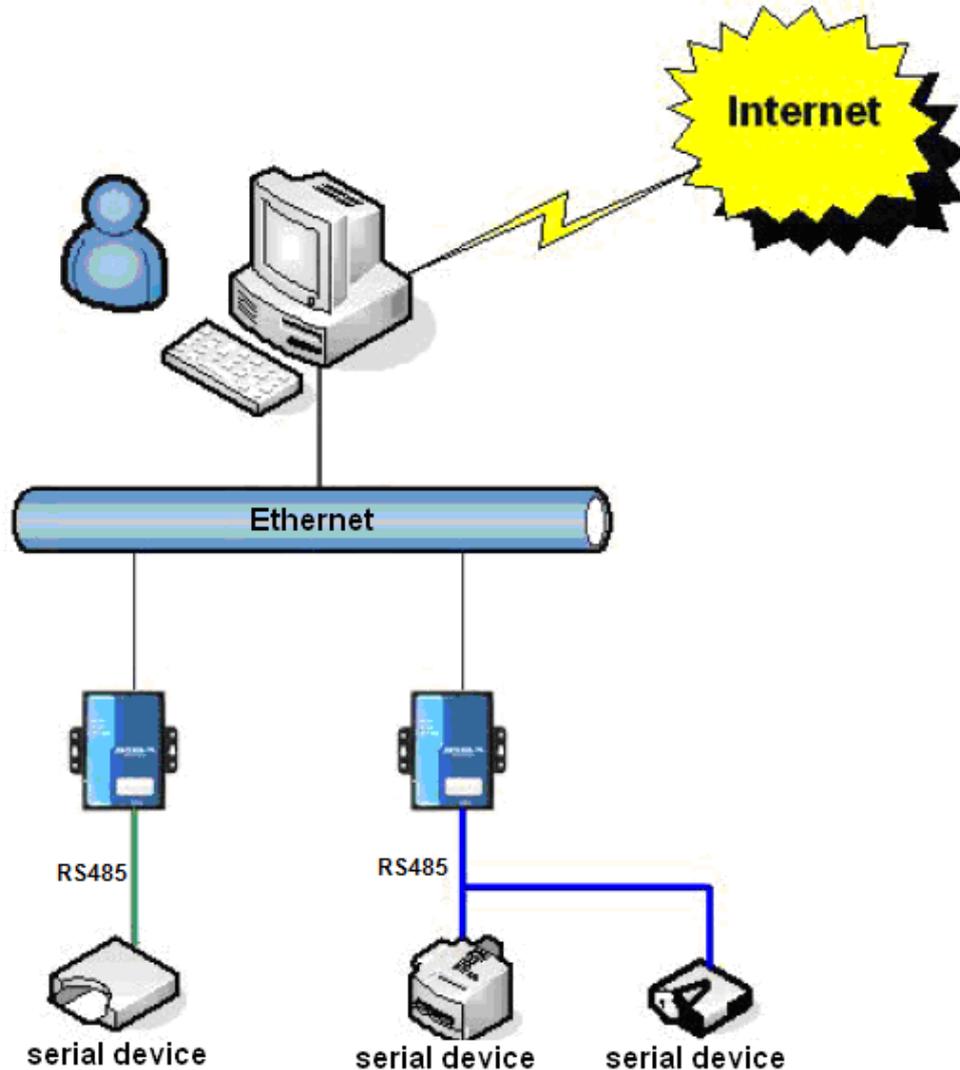

Figure 2

1.1. Feature

1. Support full duplex, high speed converting, and no packet lost.

ZLAN5102-3 is the first type of full duplex, continuous, and low cost serial server in industry. It support simultaneously converting between Ethernet &Serial

with large bulk of data with no pause, and also no data is lost.

2. Hight cost performance.

ZLAN5102-3 is designed by concept of intensification, after ensure the stability. It highly takes the cost of networking upgrading in count

3. Support TCP Server, TCP Client, UDP mode, and if communicating with ZLVirCom (our software), it automatically change to Real Com Driver Mode.

4. Support band rate 1200~460800bps, data size 5~8bits, parity of None, Odd, Even, Mark, Space. Support CTS/RTS hardware flow control.

5. Equipped freely with our Windows Virtual Serial & Device Management Tool ZLVirCom. It supports virtual serial and searching device or modifying parameters with ZLVircom.

6. Provide device management library (Window DLL library). It will help user to develop program with VC, VB, Delphi, C++ Builder. User need only use read() or write() function to communicate with ZLAN5102-3.

7. The innovative disconnecting detecting method. Whether it running in TCP Server mode or TCP Client mode, once network is disconnected by some reason, the disconnecting detecting method will detected it and reestablished the connecting.

8. With build-in Web server, its parameters can be modified by web browser.

9. Support DHCP, easy for IP management and solve IP confliction.

10. Support DNS. It fulfills the need of access data server through domain name.

11. Flexible serial data framing setting. It fulfills all kinds of serial data frame requirement.

12. UDP mode support dynamic destination address mode. It helps for multi-user mange one serial server.

13. Real Com Driver mode support using the 9-th bit to facilitate communication with milt-device. (the 9-th bit being 0 means data frame and 1 means address frame).

14. Support searching serial servers and modifying parameters through Internet remotely

15. Support parameter modifying protection, preventing modifying by accident.

Support running with default parameters.

16. Build-in 2 KV electrical plus protection in RJ45.
17. High protection of electromagnetic interference, with its high electromagnetic interference protection SECC external shell.

1.2. Technical Parameters

Figure			
Interface:	Serial:DB9 Male for RS232, 2 PIN terminal for RS485/RS422; RJ45 Networking connector; Power plug-in or terminal		
Size:	L x W x H = 9.4cm x 6.5cm x 2.5cm		
Communicate interface			
Ethernet:	10M/100M, 2KV electrical plus protection		
Serial	RS232/RS485/422×1: RXD, TXD, GND, CTS, RTS		
Serial parameters			
Band rate:	1200~460800bps	Parity:	None, Odd, Even, Mark, Space
Data size:	5~9	Flow control:	CTS/RTS,DTR/DSR,XON/XOFF
Software			
protocol:	ETHERNET, IP, TCP, UDP, HTTP, ARP, ICMP, DHCP, DNS,		
Setting method :	ZLVirCom, WEB browser, device management library		
Net communication method:	Socket, Virtual serial , device management library		
Work mode			
TCP server, TCP client, UDP, Real Com Driver			
Power			
Power:	9~24V DC.		
Environment			
Running temperature:	-40~85℃		
Storage temp:	-40~120℃		

Humidity:	5~95%RH

1.3. Hardware description

The top view of ZLAN5102-3 is show in Figure 3.

Panel:

1. ACT: the ACT light indicates if there is data transform between serial and Ethernet.
2. LINK: LINK light indicates if Ethernet line is plug in.
3. POWER. power on.

Figure 3

Figure 4

The front view is show in Figure 4.

1. RS485/RS 422is used to connect user RS485 /RS422device.
2. Power is a standard power plug-in (inner pin is positive).
3. RJ45 networking interface.

The back view is show in Figure 5:

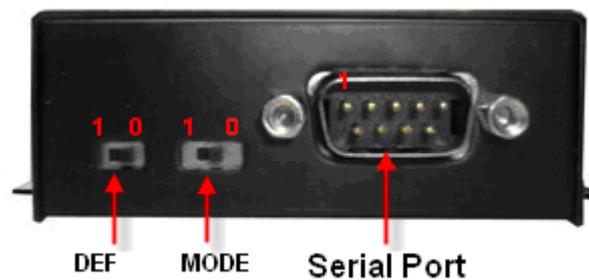

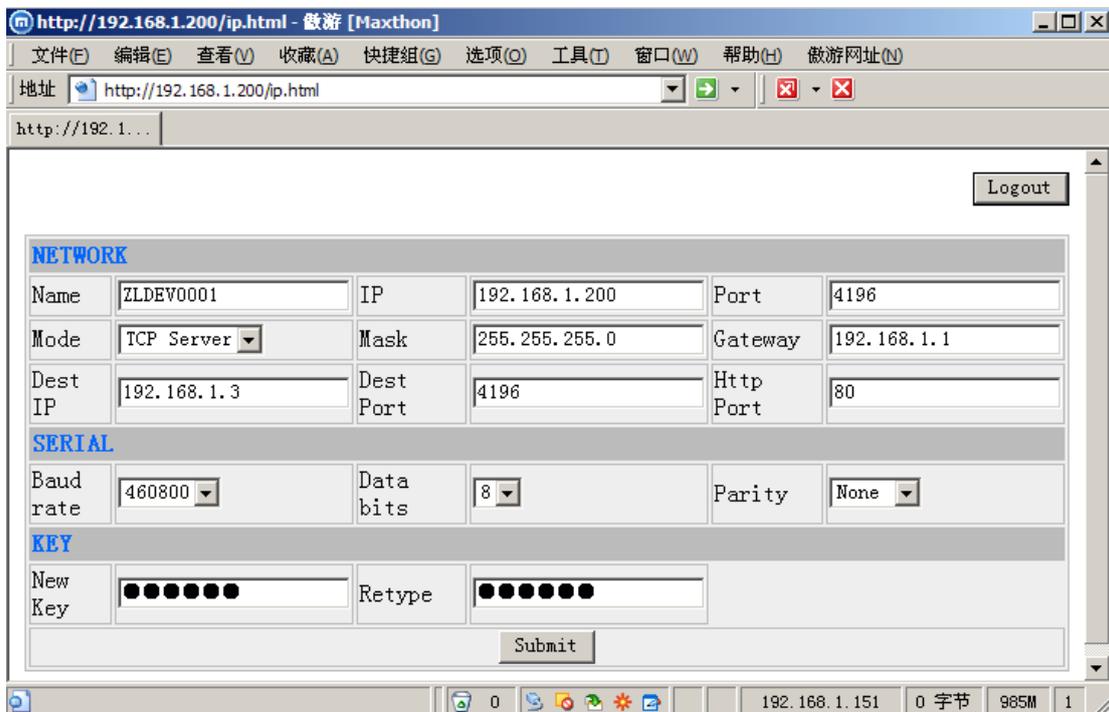

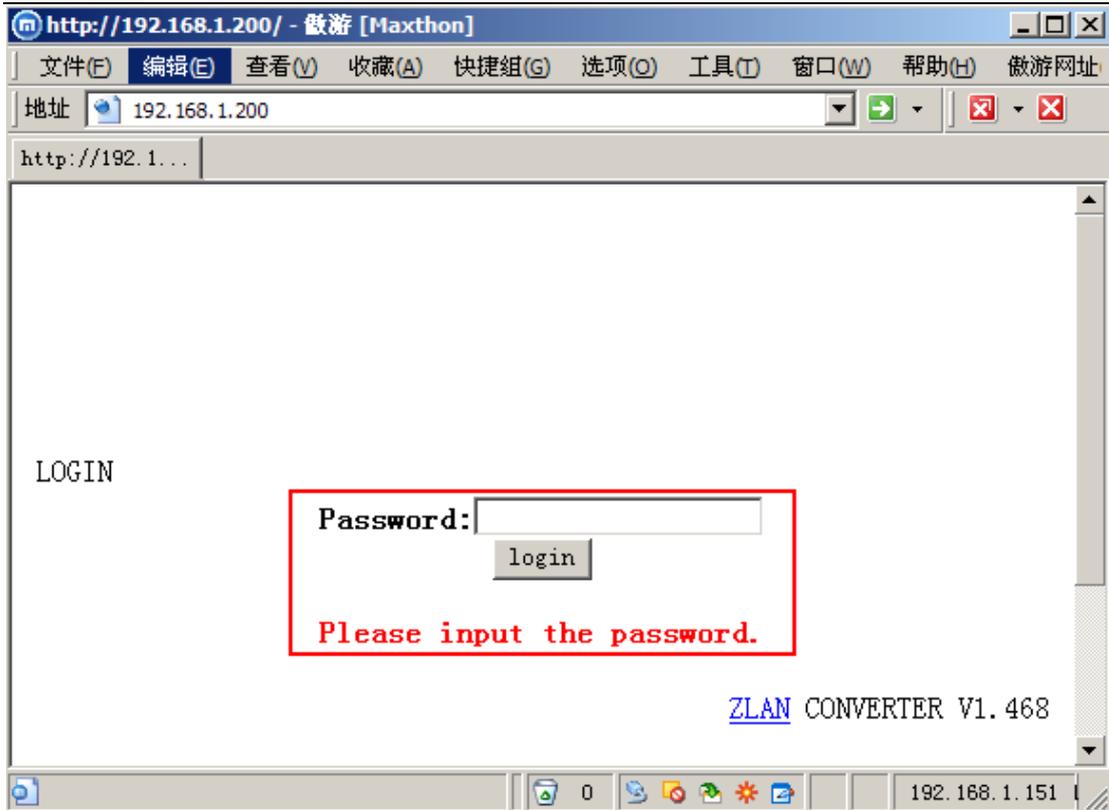

Figure 5

1. DEF switch: When DEF is push to 1, serial server will start with default parameter (default IP is 192.168.0.254)
2. RS232 port. DB9 mail interface.

2. Config

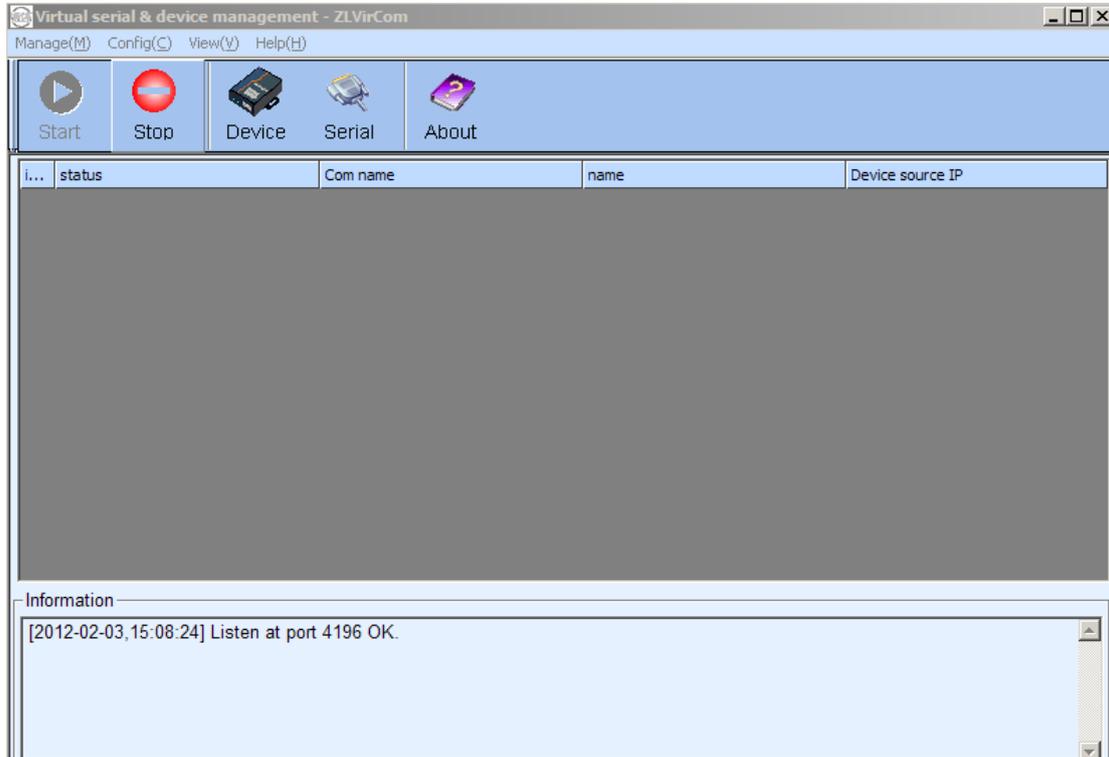

2.1. web configuration

Input the IP of ZLAN5102-3 in the web browser and open the login web. Input the password of 123456 and login. Then you open a configuration web and you can change IP, baud rate and so on.

2.2. windows tool config

Please run the English version of zlvircom software. Then press Device button. In the next press search button and find the device then press Edit button to edit this device.

The screenshot shows the 'Device setting' window with the following configuration:

Section	Parameter	Value	
Device information	Virtual serial	Not us	
	Dev name	ZLDEV00	
	Firmware Ver	V1.468	
Function of the device	Web download	<input type="checkbox"/>	
	DNS system	<input checked="" type="checkbox"/>	
	REAL_COM protocol	<input checked="" type="checkbox"/>	
	Modbus TCP to RTU	<input type="checkbox"/>	
	Serial commnad	<input checked="" type="checkbox"/>	
	DHCP support	<input checked="" type="checkbox"/>	
	Storage Extend	<input type="checkbox"/>	
	Multi-TCP connection	<input type="checkbox"/>	
	Network	IP mode	Static
		IP addr	192.168.1.200
Port		4196	
Work mode		TCP server	
Net mask		255.255.255.0	
Gateway		192.168.1.1	
Dest. IP domain		192.168.1.3 <small>Local IP</small>	
Dest. port		4196	
Serial	Baud rate	115200	
	Data bits	8	
	Parity	None	
	Stop bits	1	
	Flow control	None	
Advanced settings	DNS server IP	8.8.4.4	
	Dest. mode	Dynamic	
	Transfer protocol	None	
	Keep alive time	60 (s)	
	Reconnet time	12 (s)	
	Http port	80	
	UDP Group IP	230.90.76.1	
	IO port setting 0x	00	
	UDP filter pos	0 code 00 mask 00	
	Restart for no data	<input type="checkbox"/> Timely send paramet	
Framing rule	Max frame length	1300 (byte)	
	Max interval	3 (ms)	
	Frame head char	(Hex)	
	Frame rear char	(Hex)	

Buttons at the bottom: Restart dev, Get default, Modify setting, Cancel
