So our aim as the owner of CMC PRIVATE HOSPITAL, which is one of the most highly qualified hospital in Iraq and number one in Erbil / Kurdistan region. So, after our success in serving for more than 6 years in hospital part we want to open university that contains medical branches . In the beginning we want to start with the Nursing/biochemistry/ and physiotherapy branches , For the future wise we also want to open dentistry and pharmacy departments. Just like our hospital's success and highly recommended in the region , We would like to open the university also in a highly successful level , so that we would like to contact with a great university like yours and have a link between us. But we haven't prepared the design yet , we want to make the university's design just same as the university that we will be making link with . In the first year we Will be able to accept nearly 100 students for each branch , but for the next years we can accept more than 100 students . The fee per year of study for each student is around 3500\$, and dentistry and pharmacy students is around 6500\$ But it doesn't include accommodation and transportation.
